# pollinator **LIVE**

a distance learning adventure

Photo: Kurt Froelich

While pollinators may come in small sizes, they play a large and often undervalued role in the production of the food we eat, the health of flowering plants, and the future of wildlife.

Join us for a series of live interactive webcasts, web seminars, and satellite field trips about pollinators, gardening, and conservation. The project web site provides resources that meet National Science Education Standards for the classroom.

Register FREE at
